

# Services for international patients

To support the needs of our international patients, CTCA offers the following services at our hospitals:

- **Coordinated care** offered in one location, all under one roof, so patients do not have to navigate large campuses or multiple buildings
- **Language services**, including on-site medical interpreters, translated medical forms and remote video interpretation services
- **Custom dietary options** with meals made according to the patient's needs and preferences
- **Business centers** with access to computers, printers, high-speed Internet and video calling services
- **Travel service teams** staffed by professionals trained to help patients and caregivers arrange long- or short-term transportation, lodging and other logistics
- **Private inpatient rooms** with unlimited guest visiting hours
- **Dedicated patient advocates** who are assigned to each international patient, 24 hours a day, before, during and after treatment

Each of our hospitals is located near a major U.S. city. These locations offer a variety of cultural, educational and social activities, including shopping and sporting events. The concierge teams at CTCA offer assistance with planning excursions for patients and families during their time in the United States.

For more information, please call +1 844-486-0258, 24 hours a day, to speak with an International Oncology Information Specialist. Fees may apply. Or visit [cancercenter.com/international](http://cancercenter.com/international) for more information.

## International Patient Services at Cancer Treatment Centers of America (CTCA)

# Fighting cancer is all we do—every stage, every day

## Treatment statistics and results

We publish our patient survival rates along with patient experience, quality of life, symptom management and patient safety program results. Our treatment statistics and results are available on [cancercenter.com/international](https://cancercenter.com/international).

Our oncologists and physicians deliver cancer treatment for all stages, including advanced and hard-to-treat cancers, delivering comprehensive, multidisciplinary care, all under one roof, in the many critical areas of cancer care. Our services include:

- **Diagnostics/imaging**, with results generated on-site and generally delivered within three to five days
- **Advanced genomic testing**, to provide personalized medicine solutions
- **Surgery**, including non-invasive robotic surgery options
- **Radiation therapy** such as IORT (Intraoperative Radiation Therapy) and hypofractionation<sup>1</sup>
- **Chemotherapy**
- **Immunotherapy**
- **Stem cell transplantation**
- **Physical therapy and rehabilitation**
- **Pain management**

Other critical treatment services we offer include:

- Pulmonology
- Hematology
- Gastroenterology
- Reconstructive surgery
- Neurosurgery

We are constantly searching for world-class physicians, innovative treatment options and cutting-edge medical technology to diagnose and treat cancer.

<sup>1</sup>At CTCA, we offer a radiation treatment regimen called hypofractionation, which is designed to reduce the length of standard radiation treatment—in some cases, from six to eight weeks to two weeks—helping to reduce costs, deliver better outcomes and send the patient home earlier. **Patients must meet clinical qualifications to receive hypofractionated treatment.**

## Advanced treatments, integrative therapies

At Cancer Treatment Centers of America (CTCA), we understand you want the best possible outcomes for your patients. Our care model customizes treatment to patients' individual needs, diagnoses and treatment goals.

This care model is designed to help reduce side effects and maintain quality of life both during and after cancer treatment. It combines advanced genomic testing, precision cancer treatment and other advanced tools with surgery, radiation, immunotherapy and chemotherapy, along with evidence-based supportive therapies such as nutritional support, pain management and physical therapy.

CTCA care teams integrate these therapies into a comprehensive treatment plan. These supportive oncology services may help:

- *Maintain strength*
- *Keep the body nourished*
- *Boost the immune system*
- *Promote a return to normal life*

We know that managing the side effects of cancer treatment can be difficult and take a toll on the body. Our whole-person approach is designed to help patients achieve physical, emotional and spiritual wellness.
